REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: claim 4 of the instant application (newly renumbered claim 1) is drawn to methods of producing a 5-amino-deoxyuridine compound with at least 2 phosphate moieties by reacting a nucleoside (which has no phosphorous moieties) with a compound to form the nucleotide product. The prior art does not teach or fairly suggest methods of phosphorylating 5-amino-deoxyuridine. Additionally, the method of claim 31 (newly renumbered claim 4) is drawn to synthesizing a nucleotide modified in the 5-position of the 5-amino-uracil base by reacting the NH_2 group of the nucleotide with a compound which produces NR^1R^2 , wherein at least one R comprises a carbon atom. The prior art is not seen to teach or fairly suggest changing the amino group of a 5-amino-deoxyuridine nucleotide to a carbon containing moiety. The closest prior art is seen to be Haley et al. (US 4,672,111) who teaches reducing 5-nitro-deoxyuridine to 5-amino-deoxyuridine, wherein phosphorylating 5-amino-deoxyuridine was not disclosed. Haley et al. additionally teach to change the amino group of 5-amino-deoxyuridine-diphosphate to an azido group, however, an azido group does not contain any carbon atoms. The prior art is not seen to teach or fairly suggest the methods as instantly claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
